

Use an Application Manifest

Goal

Run `cf push` with an application manifest in your application directory, setting the memory limit to 128M.

Approximate time: 10 minutes

Exercises

Create a deployment manifest

1. Create an application manifest for your simple application. Set the maximum memory to 128M.
2. Run `cf push` and verify that the manifest settings are working.

Check this out

1. There's a CF manifest generator online at <http://cfmanigen.mybluemix.net/>
